Education

- Diploma in Data Science
IIT Madras(Online, Self-Paced) | 2025–2026(Dec)
- B.Com (Hons) — 81.6%
Aryabhatta College, DU | 2024
- Senior Secondary — 80.75%
Columbia Foundation | 2021

Certifications

- Google Business Intelligence Professional Certificate
- Practical Time Series Analysis
- Business Statistics & Analysis
- SQL, Tableau, Power BI & Excel — Udemy
- Python for Data Analysis & BI — Udemy

Languages

- English (Fluent)
- Hindi (Fluent)

Professional Summary

Entry-level Data Analyst with hands-on experience in data wrangling, statistical analysis, demand forecasting, and machine learning. Improved demand forecast accuracy by 15–20% using ARIMA time-series models; reduced ML threat-detection false positives by ~18% on a 100K+ record dataset. Proficient in Python, SQL, Power BI, and Tableau, with experience building automated reporting pipelines, ETL workflows, and executive dashboards.

Key Skills

- Technical: Python (Pandas, NumPy, Scikit-learn, Matplotlib) • SQL • Power BI • Tableau • Excel (VBA, Power Query) • ETL Pipelines
- ML & Analytics: ARIMA Forecasting • Predictive Modeling • Classification & Regression • Anomaly Detection • A/B Testing • Feature Engineering
- Business & BI: Demand Forecasting • Inventory Optimization (EOQ, Safety Stock) • ABC/Pareto Analysis • KPI Design • Executive Dashboards
- AI & Automation: LLM Prompt Engineering • AI-assisted Reporting Pipelines • Semantic Search

Internship Experience

- Data Analyst Intern • Analytics Career Connect (ACC)**May 2026 – Present
- Designed and delivered 5 dashboards using Looker Studio and Google Sheets, transforming raw datasets into actionable visual insights for business reporting.
 - Automated data workflows using Power Automate and Python scripting, reducing repetitive processing tasks and improving team efficiency across live project pipelines.
 - Developed Python scripts for web scraping to support data domain research, and applied advanced concepts including Flask, Django, and Machine Learning fundamentals in project work.

- Data Analyst Intern • Unified Mentor**Aug 2025 – Oct 2025
- Built Random Forest & Logistic Regression models on a 100K+ record dataset, improving threat-detection precision by ~18% and reducing false positives.
 - Automated end-to-end ETL pipeline in Python, cutting manual data prep time by 30% and enabling faster model iteration.
 - Designed executive risk dashboards in Power BI & Tableau translating ML outputs into plain-language threat summaries for stakeholder decision-making.
 - Applied feature engineering to multi-state EV sales data, identifying top 3 state-level adoption drivers for data-backed regional market entry recommendations.

Projects

- ChargeDesert — EV Infrastructure Gap & Site Recommendation Platform | Python, GIS, Streamlit**2026
- Built an end-to-end EV infrastructure intelligence platform integrating 130K+ geospatial records to identify charging gaps and high-potential locations.
 - Developed spatial analysis, AHP/TOPSIS-based site scoring, road-risk assessment, and what-if simulation to prioritize optimal charging locations.
 - Delivered interactive GIS dashboards with explainable recommendations, enabling data-driven EV infrastructure planning.
- Water ATM Downtime Atlas – Rural Drinking Water Infrastructure Analytics**2026
- Built a Pan-India Water ATM Operational Intelligence Database by web-scraping and integrating data from government portals, tender sites, Smart City platforms, and public grievance systems.
 - Analyzed downtime patterns, maintenance response times, and failure causes (power supply, RO membrane issues, vandalism) across states and districts to identify key drivers of operational reliability.
 - Designed interactive dashboards (state-wise coverage, operational status, downtime analysis, vendor performance) enabling data-driven infrastructure planning for government and NGO stakeholders.
- AI-Assisted Sales Report Automation | Personal Project**2026
- Built a Python ETL pipeline using LLM prompt engineering to auto-generate structured sales summaries, reducing manual reporting time by ~40%.
 - Integrated semantic search enabling plain-English querying over product/customer datasets, replacing repetitive SQL lookups.
- Demand Forecasting & Inventory Optimization | Taiwal Enterprises**2025
- Replaced manual demand estimation with ARIMA time-series models, improving forecast accuracy by 15–20% and reducing stockout/overstock risk.
 - Performed ABC/Pareto analysis identifying 20% of SKUs driving ~75% of revenue, enabling strategic procurement reallocation.
 - Built EOQ, Safety Stock, and Reorder Point models; delivered a client-adopted inventory strategy with actionable reorder schedules.
- Market Research & Competitive Analysis | Business.io Society, IIT Madras**2025
- Contributed to structured competitive analysis for HMC Group, synthesizing multi-source market data into prioritized strategic recommendations.

Competitions & Simulations

- Top 1 Percentile — Unstop Weekly Case Challenges: Consistently ranked nationally for structured problem-solving and data storytelling.
- BCG X Data Science Simulation (Forage): End-to-end project covering data cleaning, EDA, predictive modeling, and stakeholder-ready presentation.
- Deloitte Data Science Simulation (Forage): Statistical analysis, data visualization, and business recommendations in a simulated consulting engagement.
